

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. ALPHABETICALLY

INTRODUCTION.

The following is a catalogue of the Birds of the West Indies, exclusive of those found on the Islands of Trinidad and Tobago, which have not been recorded as occurring elsewhere in North America, north of Mexico.

While I have been greatly aided in making this catalogue by Mr. Charles B. Cory's excellent works upon West Indian Birds, it will be seen that I have been able to make a few changes in habitat of some of the species through my own observations, and have also added some new forms, all from the Bahamas. Descriptions of these, as well as notes upon some of the changes in habitat, nomenclature etc., may be found in No. 3, Vol. III, of my Contributions to Science which was issued a short time before the publication of this catalogue.

**APPENDIX TO CATALOGUE
OF THE BIRDS OF THE WEST INDIES.**

BY

C. J. MAYNARD.

DESCRIPTION OF NEW SPECIES.

As the publication of the conclusion of Vol. III of my Contributions to Science has been greatly delayed, and as I wish to distribute this catalogue, so long withheld, I have given a brief description of the new species mentioned, referring the reader to the volume of Contributions, mentioned in the introduction, for further descriptions and figures.

15 COLINUS BAHAMENSIS

Bahama Bob-white

Size, form, and general coloration, of the Florida Bobwhite, *Colinus v. floridanus*, but differs in having narrower black bandings below which show a tendency to form arrow shaped markings. The chestnut is also richer. Habitat, the island of New Providence. Types male and female in my collection.

53 SPEOTYTO BAHAMENSIS.

Bahama Burrowing Owl.

Intermediate in coloration between *S. floridana* and *S. dominicensis*, thus differing from both. Habitat, New Providence and probably Eleuthera. Type, a female in my collection.

268 DENDROICA BAHAMENSIS

Bahama Pine Warbler

Similar to *Dendroica vigorsii*, but paler in general coloration, especially below where the color is de-

cidedly yellow, not greenish yellow. Habitat, New Providence. Types, male and female in my collection.

Species described provisionally and not given in the list.

HAEMOTOPUS PRATTII

Pratt's Oyster Catcher.

Similar to the *H. palliatus*, but differs in having a stouter, thicker bill, and in being much lighter in color above, but with the dark of the back encroaching upon the white of the rump. Types in my collection taken on Flemming's Key, Bahamas, April 29, 1893, but probably occurs throughout the islands as a resident.

I have named this species for my friend, Marland L. Pratt to whom this catalogue is dedicated.

Actual date of issue, November twenty-ninth, 1899.

29 COLUMBIGALLINA JAMAICENSIS.

Jamaica Ground Dove.

Similar to *C. bahamensis*, but differs in being lighter in shade and in having the bill distinctly yellow at the base. Types, male and female, in the Bryant Collection.

This is not the *C. passerina* of Linnaeus; he, having no type, based his description mainly upon Catesby's figure of the Ground Dove of the Carolinas. This figure, although good, is sparrow-like enough in form to have evidently suggested the name of *passerina* to Linnaeus.

Species described provisionally and not given in the list.

13.1 HAEMATOPUS PRATTII.

Pratt's Oyster Catcher.

Similar to *H. palliatus*, but differs in having a stouter, thicker bill, and in being much lighter in color above, but with the dark of the back encroaching upon the white of the rump. SECOND APPENDIX.

ADDITIONS AND CORRECTIONS.

In November, 1899, a small edition of the first Appendix to this catalogue was issued, but the catalogue itself was withheld. It is now published with the first appendix printed as it then appeared. Through an inadvertence I quite overlooked Mr. Cory's Review of the Birds of the West Indies printed in the Auk for October, 1891, thus in two cases I have used names in describing birds that he had used for different species of the same genera (see Nos. 53 and 268). Corrections, in the catalogue and additions, changes etc. in it, appear in the following pages, approximately bringing the catalogue up to date. I have not, however, for several reasons, always given all of the generic changes that Mr. Ridgeway has given in his Birds of North and Middle America, or that have been recently published by other authors.

Believing, as I do, that sub-specific names should be given only to birds which intergrade with allied forms through intermingling at points of actual contact, I cannot consider insular forms as sub-specific, for they are barred by isolation from this intergradation.

Types of the species described mentioned as being in my collection are now in the Bangs Collection.

17.1 ORTALIS RUFICAUDATA Jard.

Red-tailed Chachalaca.

Union Island and Grenada.

29.1 COLUMBIGALLINA AFLAVIDA Palmer & Riley.

Cuban Ground Dove.
